

Dec. 1, 2016

Dear Suppliers,

As LMI Aerospace continues to support an industry-wide push for a zero-defect mindset to eliminate production discrepancies and ensure 100% product quality, we are making another resource available to help our suppliers do the same.

Available now in the Supplier section of the LMI website is a Customer Specifications Revisions Reference Table that allows our suppliers to verify that they are producing to the most current specifications revisions. You can access this spreadsheet at: <http://www.lmiaerospace.com/supplier-management/supplier-quality-requirements/> (scroll down to **Customer Specifications Revisions**).

This spreadsheet includes current specifications revisions and approved amendments/changes pertinent to LMI and our suppliers' work scope. It will be updated monthly and will allow suppliers to verify specification revision levels prior to commencing production. NOTE: This list does not contain links to the specifications; suppliers should continue to contact their LMI procurement agents to request copies of specifications.

Thank you for your continued support as we work together toward a zero-defect environment. We hope this list serves as another beneficial tool in ensuring 100% product quality. If you have questions, please contact your LMI supplier quality representative or procurement agent.
